NORTH-HOLLAND

Subject Index

A

Abstract distributed programs, constraint based approach for testing, 33:223
Abstraction levels, prototyping and, 36:47
Academe, industry vs., 35:167
Algebra, extended relational, 33:87
Algebraic Petri nets, structured analysis methods and, 35:15
Algorithms
  classified, public key escrow system and, 35:73
  fault-tolerant, mutual exclusion in distributed system, 35:217
  linear-time, control structure of program slice and, 34:123
  parallel searching, 32:121
  Ziegler's sparse matrix compression, improvement, 35:67
Application software package, acquisition and implementation process, 32:57
Asynchronous distributed cooperation, coordination and artifact semantics in, 33:179
Asynchronous write facility, metadata and, 35:43

B

BaLinda suite, parallelism and, 32:251
Behavior abstraction, verification technique and large distributed systems and, 33:273
Behavioral descriptions, object-oriented modeling and, 34:105
BOOM, 33:171
Branch coverage, bound on number of test cases for, 35:95
Browsing service, heterogenous data exploration with advanced, 33:123

C

C program, early size prediction, 32:65
Calibrated Airborne Multispectral Scanner (CAMS), gross feature detection in remotely sensed data, 34:151
Change management framework, dependency maintenance and change notification with, 34:231
Change notification, change management framework and, 34:231
Client/developer communication, functional-decomposition vs object-orientation and, 33:163
Code components, documentation, 34:89
Code constructs, comprehension of recursive vs. iterative, 32:73
Code generator generators, overview and industrial application, 32:185
Cognitive processes, program comprehension, 34:177
Communication, client/developer, functional-decomposition vs. object-orientation and, 33:163
Communication protocols
  concurrent failures recovery in, 35:55
  temporal logic for specification of, 33:299
Commutative redundancy, memoisation techniques and, 35:29
Components reuse, data-intensive business programs and, 34:3
Compositional adjustment, MENDELS ZONE and, 33:207
Comprehension, recursive vs. iterative code constructs, 32:73
Compression algorithm, Ziegler's sparse matrix, improvement, 35:67
Computer science, mathematics and, 34:173
Computers, creativity and, 34:85
Computing history, unusual phenomenon, 34:1
Conceptual modeling, semantics and, 33:113
Concurrency control, object-oriented databases and, 35:169
Concurrent failures, communication protocols and recovery from, 35:55
Concurrent partial match retrieval, multiple key hashing files and, 35:199
Concurrent programming, nondeterminism and, 33:207
Concurrent systems, algebraic Petri nets and specification of distributed and, 35:15
Conferences
  creativity and computers, 34:85
  International Conference on Information Systems Development, 33:111
Constraint-based approach, testing abstract distributed programs, 33:223
Constraints, behavioral descriptions in object-oriented modeling and, 34:105
Contingency factors, information systems development, 33:153
Control structure, program slice, 34:123
Coordination and artifact semantics, asynchronous distributed cooperation and, 33:179
Cost constraints, hybrid fault-tolerant software design and modeling with, 35:141
Creativity, computers and, 34:85

D

Data analysis, intrusion detection, 33:101
Data exploration, advanced browsing service for heterogenous, 33:123
Data-intensive business programs, components reuse for, 34:3
Data-parallelism, object-oriented framework for supercomputing and, 33:239
Databases
  distributed systems
    design and implementation, 34:21
    fragmentation transparency, 35:185
    nonblocking timed atomic commit protocol for real-time, 34:161
  object-oriented
    change management framework and, 34:231
    concurrency control in, 35:169
    indexing structure for, 32:237
    relational approach vs., 33:87
  object technology, application to software analysis and maintenance system, 32:41
  relational approach
    object-oriented vs., 33:87
    performance criteria, 34:31
ddgraph arcs, branch testing and unconstrained, 35:95
Debugging tools, layered model for building monitoring and, 34:211
Dependency maintenance, change management framework and, 34:231
Dictionary organization, efficient similarity retrieval and, 34:127
Distributed systems
  abstract, constraint-based approach for testing, 33:223
  algebraic Petri nets and specification of concurrent and, 35:15
  databases
    design and implementation, 34:21
    nonblocking timed atomic commit protocol for real-time, 34:161
  fault-tolerant algorithm for mutual exclusion in, 35:217
  fragmentation transparency in databases, 35:185
  software engineering for, introduction, 33:205
  specification and run-time detec-

tion of dynamic properties in, 33:287
verification technique for large, 33:273
Distributed telecommunication services development, object-oriented methodology for, 33:253
Documentation, code components, 34:89
Domain fault detection, test selection criterion for, 35:107
Domain policies, object-oriented technique and, 33:14
Domain test selection criterion, empirical validation, 35:107

E
Editorial policy, *Journal of Systems and Software*, 32:1
Efficiency measures
relational databases in different normal forms, 34:31
simulators for inefficiency detection parallel programs, 33:131
Environment attributes, modeling software engineering, 35:3
Escrow system, public key, 35:73

F
Factor analysis technique, partial match queries and, 32:121
Fault detection
empirical validation for domain, 35:107
evaluation of time allocation procedure for technical reviews, 35:119
Fault-tolerant algorithm, mutual exclusion in distributed system, 35:217
Fault-tolerant software, design and modeling with cost constraints, 35:141
Fault trees, safety analysis with, 35:151
File system, performance improvement, 35:43
Fixed-priority scheduling, utilization bounds and, 33:57
Formal methods
industrial use, 35:209
software research, 32:99
Formality, prototyping and, 36:47
Fragmentation transparency, distributed system databases and, 35:185
Functional-decomposition, client/developer communication and object-orientation vs., 33:163
Functional testing, specification techniques and, 32:83

G
Goals, motivation and, 35:167
Government, public key escrow system and, 35:73
Gross feature detection, remotely sensed imagery and, 34:151
Growth analysis, information systems planning in small business, 33:189

H
Hard real-time software system, HaRTS, 32:143
HaRTS, hard real-time software development environment, 32:143
Higher order software (HOS) specification, verification, 32:135
History, computing, unusual phenomenon, 34:1
Holonic organizational systems, object-oriented programming and, 34:247

development
contingency factors, 33:153
object/activity (O/A) matrix and, 33:141
object-oriented framework and, 33:3
International Conference on Information Systems Development, 33:111
planning, small business, 33:189
redesign process, 33:133
Institutions, Systems and Software Engineering scholars and, 35:85
Integrated modeling, software design and, 32:101
Integrated software engineering environments, model, 35:3
International Conference on Information Systems Development, 33:111
Interoperability, model for development environments and, 35:3
Intrusion detection, data reduction method for, 33:101
Iteration, comprehension time and, 32:73

J
Journal of Systems and Software, editorial policy, 32:1

K
Key escrow system, public, 35:73
Knowledge-based systems, software maintenance support for, 34:191
Knowledge engineering, software engineering and, 33:65

L
Languages, single-paradigm vs. mixed-representation, software maintenance and, 34:191
Law enforcement agency, public key escrow system and, 35:73
Layering, building debugging and monitoring tools and, 34:211
Linear-time algorithm, control structure of program slice and, 34:123
Linguistic framework, prototyping and, 36:47
Loops, analysis, 34:89

M
Management, productivity and, 35:1
Mathematics, computer scientist and, 34:173
Memo-functions, space-efficient, 35:29
MENDELS ZONE, compositional adjustment and, 33:207
Metadata, asynchronous write facility and, 35:43
Methodology engineering, object/activity (O/A) matrix and, 33:141
Metric framework, for object-oriented real-time systems specification languages, 34:43
Modeling, integrated, software design and, 32:101
Monitoring tools, layered model for building debugging and, 34:211
Motivation, goals and, 35:167
Multi-paradigm software approach, gross feature detection in remotely sensed imagery, 34:151
Multiple key hashing files, concurrent partial match retrieval and, 35:199
Multiprocessor machines, design methodology for real-time systems and, 33:37

N
Nondeterminism, concurrent programming and, 33:207

O
Object/activity (O/A) matrix, methodology engineering and, 33:141
Object-based knowledge representation system, industrial application, 33:123
Object-linking mechanism, component-based software development environments and, 32:227
Object-oriented approaches
client/developer communication and functional-decomposition vs., 33:163
distributed telecommunication services development and, 33:253
information systems development, 33:3
relational vs., 33:87
software development, 33:1
supercomputing and, 33:239
Object-oriented databases
change management framework and, 34:231
concurrency control in, 35:169
Object-oriented fourth generation system, BOOM, 33:171

Object-oriented modeling, behavioral descriptions, 34:105
Object-oriented programming
organizational foundations, 34:247
regression testing and, 32:21
Object-oriented real-time systems specification languages, metric framework for, 34:43
Object-oriented specification architecture, components resue for data-intensive business programs and, 34:3
Object technology, software analysis and maintenance system and, 32:41
Open systems, model for development environments and, 35:3

P

Parallel languages, BaLinda suite, 32:251
Parallel programs
simulators for inefficiency detection, 33:131
software fault-tolerant mechanisms for, 32:215
Parallel searching, data organizing algorithm for, 32:121
Partial match queries, data organizing algorithm for, 32:121
Partitioning technique, concurrent software design and, 33:15
PASCAL program, early size prediction, 32:65
Pattern matching, code generator generators and, 32:185
Performance criteria, relational databases in different normal forms, 34:31
Petri nets, structured analysis methods and algebraic, 35:15
Productivity, management and, 35:1
Program comprehension, cognitive processes in, 34:177
Program documentation, 34:89
Program slice, control structure, 34:123
Programming
concurrent, nondeterminism and, 33:207
object-oriented, organizational foundations, 34:247
Protocols
concurrency control, object-oriented databases and, 35:169
concurrent failures recovery in communication, 35:55
distributed real-time database and nonblocking timed atomic commit, 34:161
temporal logic and, 33:299
Prototyping system, formal setting for, 35:67

R

Real-time systems
design methodology for multiprocessor machines, 33:37
fixed-priority scheduling using utilization bounds, 33:57
Recursion, comprehension time and, 32:73
Redesign process, organization in information systems, 33:133
Redundancy, commutative, memoisation techniques and, 35:29
Register allocations, code generator generators and, 32:185
Regression subsets, software modeling and, 33:81
Regression testing, object-oriented programs and, 32:21
Relational approach, object-oriented vs., 33:87
Remote procedure call transaction manager, 34:133
Remotely sensed data, gross feature detection in, 34:151
Row displacement method, Ziegler's, 35:67
Run-time detection, distributed computations and dynamic property, 33:287

S

Safety analysis, fault trees and, 35:151
Safety critical systems
safety analysis with fault trees, 35:151
targeting safety-related errors during software requirements analysis, 34:223
Safety-related errors, software requirements analysis and, 34:223
Satellite image, gross feature detection in remotely sensed data, 34:151
Scheduling
fixed-priority, utilization bounds and, 33:57
simulator parameters and detection of harmful, 33:313
Scholars, Systems and Software Engineering institutions and, 35:85
Searching dictionaries, efficient similarity retrieval and, 34:127
Secret-key cryptography, public key escrow system and, 35:73
Semantics
conceptual modeling and, 33:113
coordination and artifact, asynchronous distributed cooperation and, 33:179
Similarity retrieval, dictionary organization for efficient, 34:127
Simulation environment, information systems design and, 32:3
Simulator parameters, harmful scheduling detection and, 33:313
SL-trees, indexing structure for object-oriented databases, 32:237
Slice, control structure of program, 34:123
Small business, information systems planning, 33:189
Software analysis, object technology and, 32:41
Software crisis, management issues, 32:183
Software design
concurrent failures recovery in communication protocols, 35:55
distributed database system, 34:21
hybrid fault-tolerant software design and modeling with cost constraints, 35:141
integrated modeling, 32:101
object-oriented framework for supercomputing, 33:239
partitioning technique and, 33:15
Software development
application software package acquisition and implementation process, 32:57
C and PASCAL program size prediction, 32:65
cost estimation, 32:65
evaluation of time allocation procedure for technical reviews, 35:119
HaRTS, 32:143
methodologies, 35:93
object-linking mechanism for component-based software development environments, 32:227
object-oriented approaches, 33:1
specification languages, 32:269
specification techniques for functional testing, 32:83
test tracking and analysis, 35:127
verification of higher order software (HOS), 32:135
Software engineering
distributed computing systems and, introduction, 33:205
environment attributes, 35:3
essential difficulties, 32:157
hype, 34:1
integrated modeling, 32:101
knowledge engineering and, 33:65
layered model for building monitoring and debugging tools, 34:211
object-oriented programming, organizational foundations, 34:247
support for knowledge-based systems, 34:191
Software errors, targeting safety-related, 34:223
Software fault-tolerant mechanisms, parallel programming systems and, 32:215
Software maintenance
object technology and, 32:41
regression testing and, 32:21
support for knowledge-based systems, 34:191
Software modeling, regression subsets and, 33:81
Software reengineering, cognitive processes in program comprehension, 34:177
Software requirements, targeting safety-

related errors during analysis, 34:223
Software research, formal methods, 32:99
Software specification
languages, 32:269
verification of higher order software (HOS), 32:135
Software testing, branch testing, 35:95
Space-efficient memo-functions, 35:29
Specification languages
functional phase support, 32:269
object-oriented real-time systems, metric framework for, 34:43
Specification techniques
distributed computations and dynamic property, 33:287
for functional testing, 32:83
Statistical methods, software modeling and, 33:81
Structured analysis methods, algebraic Petri nets and, 35:15
Supercomputing, object-oriented framework for, 33:239
Systems and Software Engineering scholars and institutions, 35:85

T

Technical reviews, evaluation of time allocation procedure for, 35:119
Telecommunication services, development of distributed, 33:253
Temporal logic, specification of communication protocols using, 33:299
Terminological ambiguities, conceptual modeling and, 33:113
Test tracking and analysis, integrated approach, 35:127
Time allocation procedure, experimental evaluation for technical reviews, 35:119
Timed atomic commit protocol, distributed real-time database and nonblocking, 34:161
Transaction management, remote procedure call, 34:133

V

V X V, empirical validation, 35:107
Verification abstraction, verification technique and large distributed systems and, 33:273
Verification technique, large distributed systems and, 33:273

Z

Z, evaluating effectiveness, 35:209
Ziegler's sparse matrix compression algorithm, improvement, 35:67
